EDUCATION

JK Institute of Applied Physics and technology, University of Allahabad
- B. Tech(Computer Science and Engineering) : 8.78 C.G.P.A

Prayagraj, UP, India
July 2018 - June 2022

TECHNICAL SKILLS

Programming Languages: Java(Data Structures & Algorithms), C++, JavaScript, TypeScript, SQL

Tech Skills: Spring Boot, Microservices, REST APIs, Next.js, React.js, TypeScript, MySQL, Postgresql, Oracle, Git, ELK (Elastic Search, Logstash, Kibana), Kafka, REST API, Object Oriented Programming, Agile methodology

Devops: Docker, Kubernetes, GCP, Azure, Jenkins, CI/CD, Amazon Web Services (AWS)

WORK EXPERIENCE

Java Full Stack Developer (Client: Cloud Software Group - CSG)
Hashout Technologies, Bangalore, India

May 2026 – Present

- Developing scalable **Java, Spring Boot and REST-based microservices** for enterprise licensing and software distribution platforms, implementing secure, reliable and high-performance backend services.
- Implemented **microservices-based business workflows** for license generation, entitlement management and release validation, including request validation, **JWT-based authentication/authorization** and secure REST API integrations.
- Developed **Next.js and TypeScript** features for enterprise web applications, building reusable components, implementing client-side and server-side workflows, managing application state, and integrating frontend functionality with **Spring Boot REST APIs**.
- Worked with **Apache Kafka/RabbitMQ** for asynchronous communication and event-driven microservice workflows, supporting reliable message processing across distributed services.
- Worked with **GCP services including Cloud Build, Secret Manager and Cloud KMS** for CI/CD automation, secure application configuration and cryptographic/key-management requirements, along with **Kubernetes-based cloud deployments**.
- Worked with **PostgreSQL/SQL and NoSQL databases**, focusing on data access, query optimization and reliable integration between backend microservices and persistence layers.
- Investigated and resolved **high priority production incidents** and customer-facing issues across REST APIs, authentication, entitlement validation, by analyzing application logs, request/response flows, HTTP status codes and service dependencies, identifying root causes and implementing corrective fixes.

Software Engineer (Client: Societe Generale)
Ekaggata Technologies, Bangalore, India

Jan 2024 - Present

- Collaborated across teams to **integrate third-party APIs and message queues (RabbitMQ)**, ensuring reliable and efficient inter-service communication.
- Designed and **optimized database schemas, queries, and indexing in PostgreSQL**, reducing query execution time by 30% and improving database efficiency and developed core backend workflows with **Java, Spring Boot**.
- Leveraged **test-driven development (TDD)** to deliver robust code quality with **Jest**, end-to-end tests using **Cypress, JUnit, Mockito**, API testing using **Karate** and Acceptance testing in **FitNesse**.
- Implemented Micro-frontend architecture with **Webpack and React.js**, applied lazy-loading to reduce page load times by **40%** and streamline concurrent development.
- Introduced aggregator API calls with **React hooks & TypeScript** to avoid unnecessary rendering and refactored code modules resulting in a significant reduction of the codebase from **10,000 to 6,000** lines.

Software Engineer

Cisco Systems India, Bangalore, India

Oct 2022 - Oct 2023

- Reduced network latency by eliminating redundant calls with **JavaScript**, enhancing loading performance by 25%
- Eliminated 80% of deprecative **NPM** warnings by conducting comprehensive code refactoring strategies in Node Modules and improved overall system stability and lowered production errors.
- Streamlined REST API endpoints using **Java**, **Spring Boot**, implementing a comprehensive health check feature that decreased downtime by **35%**, enhancing system reliability.

Software Engineer Trainee

Monotype Solutions India, Noida, India

Mar 2022 - Sept 2022

- Developed missing font functionality to support apps like Adobe Acrobat DC to add significant value to the desktop app and worked on C++ for background service.
- Extensive usage of Chrome DevTools for profiling and debugging purposes and performed unit testing using Jest.
- Established robust **CI/CD pipelines** in **Jenkins** to automate application deployment in **AWS**.

INTERESTS AND ACHIEVEMENTS

- Received the **Rising Star Award** at **Societe Generale** in recognition of outstanding performance, contributions, and impact during the year.
- Earned a **Recognition Letter** from the manager at Cisco for outstanding contributions and exceptional performance.
- Solved 500+ **Data Structures and Algorithms** (DSA) problems on LeetCode, enhancing problem-solving skills.
- Qualified the **GATE** examination in 2022, demonstrating a strong foundation in core engineering concepts.
